Australia: *note: samples not collected from all animals, number of individuals sampled is shown in brackets; **genetic tissues (blood, liver, kidney, muscle, skin) reproductives, stomach and intestines, toxic contaminants (liver, kidney, muscle, blubber) were sampled. Complete sets of tissue samples were not collected from all animals because in some cases the state of decomposition made this inappropriate.

Belgium: *this figure is for all small cetaceans necropsied in 2004.

France: *data not complied to date; ** typically, 'various tissues' means: teeth, skin, blubber, reproductive organs, stomach contents, kidney, liver, muscle.

Iceland: *large cetaceans; **te=teeth, mu=muscle, bl=blubber, sk=skin

USA: *samples include some or all of the following: hard parts (i.e. teeth, jaw, skull, baleen, entire skeleton, etc) and/or soft parts (i.e. skin, gonads, muscle, blubber, blood, organs, etc). Data are entered as represented by the NOAA Fisheries NER Stranding Network and have not been formally reviewed by NOAA Fisheries.

Australia: *Beached alive, dragged back into deep water, swam away; **calf, blood observed coming from bite to tail. ***same whale re-stranded.

Brazil: ^aLive stranding; died during attempt to rescue; ^banimal stranded alive; ^cthe animal's body was so deteriorated that was impossible determined the cause of death; ^dthe animal's body presented marks of nets and fishermen boats pull the carcass back to the sea before the necropsy be completely realized; ^estranding in the Enseada Beach – Guarujá; ^fcalf in moderate decomposition; ^g16m male in advanced decomposition degree; ^hskull of a calf. N = full necropsy; V = visual observation entangled, cuts, etc; U = could not be determined; F = female; M = male.

Italy: Determination of death cause: N = full necropsy; V = visual observation entangled, cuts, etc.; U = could not be determined.

Japan: 1) Recorded to the place where strandings occurred.

New Zealand: This table was presented in a different format.

Spain: A. Deep cut in front of dorsal flipper.

Australia: *Animal not sighted again after strike, strike unlikely to have killed animal.**Brazil:** *This is a 14-meter whale and has 5 healed ribs fractures. This was an old process and was not the cause of death.**Korea:** *CRC was submitted some flesh remained on the screw and identified with DNA analysis as minke whale, since this incident, the companies have cooperated with the CRC and recorded encounter of cetacean species when cruising.**UK:** *Recovered from bow of container vessel in Liverpool harbour (see *Liverpool Echo*, 21 July 2004) that had travelled from Canada.**Key:**

U = could not be determined.

Vessel Abbreviation e.g. high-speed ferry (HSF), large cargo, military, fishing vessel (FV), passenger carrying excursion (PC), other (O).

Fate: if the whale swam away (X), appeared seriously injured (I), killed (D).
