**Australia:** (\*1) This list includes: Entanglement in net or line, or entanglement probable, or accidental or intentional anthropogenic injury probable. (\*2) Genetic tissues, (blood, liver, kidney, muscle, skin) reproductives, stomach and intestines, toxic contaminants (liver, kidney, muscle, blubber). Complete sets of tissue samples were not collected from all animals because in some cases the state of decomposition made this inappropriate.

**France:** \* typically: skin, blubber, teeth, stomach, muscle, kidney, liver, gonads.

Iceland: \* O: ongoing, F: finished, \*\* Toxicology: te=trace elements, oc=organochlorines

#### Notes

**Australia:** (\*1)Genetic tissues, (blood, liver, kidney, muscle, skin) reproductives, stomach and intestines, toxic contaminants (liver, kidney, muscle, blubber). Complete sets of tissue samples were not collected from all animals because in some cases the state of decomposition made this inappropriate.

(\*2) Samples collected by C. Kemper/S.A. Museum includes strandings of the following types: Unknown; Diseased; Live stranding; Other natural causes.

(\*3) The Department of Primary Industries and Water-TAS conducts full necropsies on deceased cetaceans where accessible. Samples taken depend on the freshness of the animal indicated by the carcass code. When the specimen is highly degraded usually only skin is archived for DNA purposes.

(\*4) The two unidentified Ziphiids are currently undergoing genetic identification and species identification will be provided in next year's report

**Brazil:** \* stranded alive. \*\* Collected tissue type varied among species and was dependent to the degree of decomposition of the individuals.

**France:** \* typically: teeth or baleen plates, skin, blubber, muscle, reproductive organs, stomach contents, kidney, liver. \*\* typically: muscle, teeth, stomach contents, skin, liver, kidney. \$ includes 2 minke w., 1 sperm w., 4 Cuvier's b. w., 1 Sowerby's b. w., 2 long-finned pilot w., 34 short-beaked common d., 4 common bottlenose d., 12 striped d., 1 harbour p. § includes 1 pygmy sperm w., 1 spinner d., 1 common bottlenose d.; contributors:

**Notes:**

**Australia:** This list may include reports of probable ship strikes based on the sighting of scarring or wounds on live or stranded animals, rather than witnesses to the actual ship strike itself.

(\*1) Animal observed to have severe trauma from propeller strike. Unique marking, photos taken housed with R.Gales/DPIW-TAS

(\*2) Vessel operator collided with the whale and then spent ~10 minutes observing the animal. No visible injuries and no changes in behaviour of the animal. Animal observed to swim away displaying normal behaviour after the incident.

(\*3) Both mother and calf observed with propeller cuts. Both whale observed to swim normally irrespective of the injuries.

(\*4) The large gash on the back of this animal strongly suggested that it had been involved in a ship collision.

**Brazil:** \*The tail was cut in half and some marks over the back. Coordenadoria de Monitoramento/Resgate de Mamíferos Marinhos Data Bank.

**France:** The detectability of large whales from High Speed Ferries and from other ferries has been investigated in the aim of reducing strike risk (EPHE and SDE). This work was conducted within the limits of the *Pelagos* sanctuary, the international sanctuary for marine mammals in the northeastern Mediterranean, under a collaboration agreement with one of the main ferry companies operating from Nice and Marseille to Corsica. Another approach consists in training mariners and officers at *Ecole Nationale de la Marine Marchande* (National Shipping School in Marseille). Finally, the project REPCET is designed as to develop a tool that will inform in real time all vessels steaming in the area of the *Pelagos* sanctuary of the location of large whales reported by mariners themselves, so that they can adapt their route and speed accordingly.

Minke whale	U	1	10/6/07	Scalloway, Shetland	D	NA		NA	Animal was entangled plastic packing straps Rob Deaville, IoZ

**Notes:**

**Australia:** (\*1) Both mother and calf caught in net but released unharmed.

(\*2) Last seen alive with entanglement

(\*3) Released in New South Wales 4/10/07

(\*4) Tail almost severed, probable entanglement

(\*5) Unknown cause of death - broken/missing mandible suggests longline entanglement

(\*6) Possible humpback whale. Whale observed with line and blue plastic drum attached wrapped around right fluke.

(\*7) Possible humpback whales. 2 whales reported with debris attached. Gear entangled described as "about 2.5-3m of 10-15mm rope (green or blue) trailing from right side of whale, appears to be embedded in back of the whale by about 6-8 inches". The second report also indicated rope embedded "by about 300mm in the back behind the dorsal fin, with a bundle of other rope trailing off the main rope"

(\*8) Possible humpback whale. The whale was entangled with a green nylon rope (diameter approx 13 mm) encircling its body just before the dorsal fin. The rope appeared to be causing the whale to have difficulty swimming

**Mexico:** Float line inside mouth, cut off right side (floaters) and pulled out from left side, gillnet kept as evidence. Photos and video available

**Notes:**

**Argentina – CTH:** One Shepherd's beaked whale (*Tasmacetus shepherdi*) was found stranded on the beach on Southern Patagonia by local people who then contact CTH

**Argentina – ICB:** 83 southern right whales (6 adults, 77 calves) and 1 adult sei whale stranded dead along the shores of Peninsula Valdes in 2007. Of these, 24% (20) were found during land and aerial surveys of the shoreline of Peninsula Valdes carried out by a team of 2 to 4 researchers and park rangers, and 76% (63) were reported by a stranding network with over 70 contacts, including fishermen, coast guards, whalewatch captains, park rangers, tour guides, researchers, etc.

**FRANCE:** § include 7 unidentified medium or large cetaceans, 9 unidentified small cetaceans, 1 humpback w., 6 fin w., 5(2) common minke w., 3(1) sperm w., 1 pygmy sperm w., 5(4) Cuvier's beaked w., 1 (1) Sowerby's beaked w., 9 delphinids, 11(2) long-finned pilot w., 2 Risso's d., 18(4) common bottlenose d., 160(35) short-beaked common d., 48(12) striped d., 1 white-sided d. and 171(1) harbour p. (in brackets number with tissue samples)

# include 1 pygmy sperm w., 1 spinner d., 1 common bottlenose d.

\* include 2 unidentified delphinids, 1 clymene d., 1 pan-tropical spotted d.

§ include 1(1) sperm w., 3(3) pygmy sperm w., 1(1) pygmy killer w. (in brackets number dissected)
